Plotting Fractions (2) Game

You need:

1 - 9 Cards (at the back of the pack)

A blank 0 - 1 number line

To play:

Shuffle the cards and put them in a deck face down.

Take it in turns to turn over two cards.

Decide which number to use as the numerator and which number to use as the denominator to make an improper or proper fraction.

Plot your fraction approximately on the number line, convincing your opponent how you know where to plot it.

I have turned over $\frac{3}{5}$ so I plot it
between $\frac{1}{2}$ and $\frac{7}{10}$ because it is larger
than $\frac{1}{2}$ but smaller than $\frac{7}{10}$
I could have plotted $\frac{5}{3}$ instead.

Place the cards back into the deck.

To win:

The winner is the first player to plot 4 fractions without any of their opponent's fractions in between.

Missing Number Workout

Workout E

Place digits in the empty boxes to make the statements true.
Complete each one in several different ways.

Possible
Solution

$$\frac{\boxed{3}}{\boxed{4}} = \boxed{7}\boxed{5}\%$$

$$4\boxed{0}\% = \frac{\boxed{8}}{\boxed{20}}$$

$$\frac{\boxed{9}\boxed{6}}{\boxed{100}} = 0.\boxed{9}\boxed{6}$$

Are there any boxes that it is impossible to put a 7 in?
Why?

Are there any boxes that could have any of the digits in them?

Now complete it using the digits 0, 1, 2, 3, 4, 5, 6, 7, 8 and 9
once each.

Equivalent Puzzles

By using your knowledge of equivalence between decimals and fractions solve the following logic puzzles.

Two boys and two girls sit a test.
The marks they achieve are 65%, 43%, 83% and 72%.
Carl did better than Bob.
Deb got more than $\frac{4}{5}$ correct.
Alice had fewer than $\frac{9}{20}$ correct.

| Name | Mark |
|-------|------|
| Alice | 43% |
| Bob | 65% |
| Carl | 72% |
| Deb | 83% |

Four boys go walking and jogging.
Billy jogs twice as far as he walks.
Archie jogs less than he walks.
Dave walks the same distance as he jogs.
Charlie walks further than Dave walks.

The distances walked are 0.5km, 0.35km, 0.8 km and 0.85km

The distances jogged are $\frac{4}{5}$ km, $\frac{2}{5}$ km, $\frac{3}{4}$ km and $\frac{7}{10}$ km.

How far did each boy walk and jog?

| Name | Walk | Jog |
|---------|--------|-------------------|
| Archie | 0.5km | $\frac{2}{5}$ km |
| Billy | 0.35km | $\frac{7}{10}$ km |
| Charlie | 0.85km | $\frac{3}{4}$ km |
| Dave | 0.8km | $\frac{4}{5}$ km |

Write your own fraction and decimal equivalent logic puzzle.

Word Problem Workout

Workout G

Coco climbs $\frac{3}{8}$ of the way up the mountain.
Colin climbs 30% of the way up the mountain.
Who has climbed further up the mountain?

Coco

Colin eats 85% of his cake. Coco eats $\frac{7}{8}$ of her cake.
Who has eaten more of their cake?

Coco

Coco has three ribbons. The blue one is $\frac{4}{9}$ m long.
The red ribbon is 0.4m long and the green ribbon is $\frac{4}{11}$ m long.
Put the ribbons in order of length, from shortest to longest.

green, red, blue

In a maths test Coco gets 24 out of 30 correct.
Colin gets 85% correct. Who has the higher mark?

Colin

Coco is making a cake.
The cake needs $\frac{2}{7}$ kg of flour. It needs 25% of a kilogram of margarine and 0.3kg of sugar.
Put the three ingredients in order of the amount needed, from least to most.

Margarine, flour, sugar
