Fractions of Amounts (4) Game

You need:
Fractions of Amounts (4) Game Board
Counters or pencils

To play:
Every time it is your turn you cover (or colour) two numbers on the board.
The bold number represents the 'Whole.'
The italic number represents the fraction of that whole.
Choose whether to find $\frac{2}{3}$ or $\frac{2}{5}$ of any of the wholes. Cover that whole and the answer.

I am going to find $\frac{2}{5}$ of 45
I cover 45 and 18 on the board.

To win:
The winner is the first player to colour 5 in a line, next to each other, horizontally, vertically or diagonally.

Missing Number Workout

Put digits in the empty boxes to complete the calculations.
Complete each one in several different ways.

Possible
Solution

$$\frac{\boxed{2}}{\boxed{7}} + \frac{3}{7} = \frac{\boxed{5}}{7}$$

$$\frac{5}{9} = \frac{\boxed{4}}{\boxed{9}} + \frac{\boxed{1}}{9}$$

$$\frac{\boxed{8}}{\boxed{1}0} - \frac{2}{10} = \frac{\boxed{6}}{1\boxed{0}}$$

Are there any boxes that it is impossible to put a 7 in?
Why?

Are there any boxes that could have any of the digits in them?

Now complete all the calculations together using the digits
0, 1, 2, 3, 4, 5, 6, 7, 8 and 9 once each.
